## Aseptic Technique Post Test

**Objective:** Identify the principles of aseptic technique

1. Scrubbed persons function within a sterile field.
  - a. True
  - b. False
2. Sterile gowns and gloves should be used within the sterile field.
  - a. True
  - b. False
3. Surgical hand scrubs are performed after donning sterile gown and gloves.
  - a. True
  - b. False
4. The scrubbed person should don a sterile gown and sterile gloves from the main instrument table.
  - a. True
  - b. False
5. Sterile gowns should be considered sterile in front from the chest to the level of the sterile field, and the sleeves should be considered sterile from two inches above the elbow to the cuff.
  - a. True
  - b. False
6. Once the original gloves are donned, the gown cuff is considered contaminated.
  - a. True
  - b. False
7. Sterile drapes are used to establish the sterile field.
  - a. True
  - b. False
8. Items placed within a sterile field do not need to be sterile.
  - a. True
  - b. False
9. All items introduced onto a sterile field should be opened, dispensed and transferred by methods that maintain sterility and integrity.
  - a. True
  - b. False
10. A sterile field may be covered with a sterile drape and left unattended.
  - a. True
  - b. False
11. Causal conversation by the OR staff during a surgical procedure is not restricted as long as everyone wears a mask.
  - a. True
  - b. False
12. A scrubbed person may rest his/her arms down the sides of their body.
  - a. True
  - b. False

13. Admitting and correcting potential errors and breaches in aseptic technique is the responsibility of
- perioperative nurses only
  - housekeeping staff members
  - surgeons
  - medical students
  - everyone associated with the operating room and patient care
14. The sterile field
- must not be touched by non-sterile persons
  - is the top surface of the draped tables and the patient
  - must immediately be re-established by corrective action if contamination occurs
  - all of the above
15. When draping the sterile field
- only the top surfaces of draped tables are considered sterile
  - scrubbed persons drape from sterile to unsterile areas
  - the sterile drapes are always held above waist level until properly positioned
  - all of the above
16. Once sterile drapes are established, they may not be moved.
- True
  - False
